

Name _____

Period _____

Name/Initial Design Project

Objective: Create a symmetrical design with the letters of your name.

Standards: Artistic Perception 1.4, 1.5, 1.6

Creative Expression 2.1,2.4

Materials: Pencil, eraser, carbon paper, straight edge scissors, black sharpie, colored pencils and markers.

Resources: Student and teacher examples.

Directions:

1. Listen to teacher introduce project and show examples.
2. Use the templates to sketch your name in the triangles.
3. You must use at least 3 letters. Anything extra such as more letters and or characters can lead to a higher grade. Be creative, neat and original.
4. Your letters/characters must cover the entire triangle. Make sure most or all run off the triangle, this will be the difference between an A/B or C/D
5. Get approval from teacher moving on to final.
6. Decide on a good color combo, your favorite colors may not get you an A/B. (color harmonies can help-cool/warm, primary, secondary, etc.)
7. Follow teacher demonstration on how to cut and fold your paper.
8. Use a pencil to draw your approved design, be neat and ask teacher for help when confused.
9. Follow teacher demonstration on how to copy your name design using carbon paper only. Do not try to copy free hand!
10. Use a black sharpie to go over your pencil name design; this is where you correct any errors. Remember to make sure all triangles are exactly the same. Four will be a reflection of the Four original designs. This process is what creates the symmetrical design.
11. Clean your paper with eraser, try not to smear the design.
12. After teacher approval, make a copy and color with your choice of colored markers or pencils. Turn in for a grade, ***Good Luck!***

Name _____

Period _____

Letter should run off the edge.

Use thick interesting letters with **bold** lines.

Create your own design in any direction.

Remember you are only designing ONE of the right triangles in the square! You will trace the other **SEVEN**.
